

# Care & Maintenance

Sureplay International recommends basic maintenance to keep your system looking new for years to come

To clean the system of simple debris (leaves, loose dirt, etc.) a gas blower or a soft brush broom can be used. For embedded dirt or common stains, a power washer with a wide flow nozzle as well as low PSI. (No more than 1,600 PSI) can be utilized.

Snow removal is not necessary, as Surepour is a porous surface. However, if you need to provide access, a plastic shovel or soft brooms are acceptable methods. **All melting agents are prohibited for snow removal.**

For patching small areas we offer a self contained repair kit, which can be purchased along with detailed installation instructions. Any repair kit can be customized to your particular project or situation, they come in all of the Surepour colors/blends, and cover six square feet per kit.

In addition to these forms of maintenance, Sureplay offers an extended warranty and maintenance package for an additional fee.
